In this fun, interactive hands-on class women will acquire and practice basic home repair skills. First, students will understand how to safely and efficiently operate several common power tools (cordless drill/driver, circular saw, miter saw, and Sawzall) available today. Next, students put their power tool skills to use making a toolbox. Then, learners will fix holes in their drywall. This class will teach students to repair everything from a small crack to a large hole. Finally, the plumbing system (faucets and toilets) will be introduced and participants will learn how to fix common problems on these appliances through experience-based learning.
